DETAILED ACTION

1. This is in response to the Applicant's arguments and amendments filed on December 18, 2008, in which claims 1, 6-10, 12-14, 20, 25, 27-29, and 31-33 have been amended, and claims 3, 11, 19, 22, and 30 have been canceled. Claims 1-2, 4-10, 12-18, 20-21, 23-29, and 31-38 are currently pending.

Allowable Subject Matter

2. After a further search and thorough examination of the present application and in view of the applicant's arguments, claims 1-2, 4-10, 12-18, 20-21, 23-29, and 31-38, renumbered as 1-33, are found to be in condition of allowance.

3. The following is an examiner's statement of reasons for allowance: the prior arts teach the host device goes into a reduced power only packet that meets the criteria provided by the host device are allowed to wake up the host device, in response to the wake up call from the access point the host device is awakened by the station. The prior arts further teach the computing system responds to an event that wakes the computing system from a sleep mode, the computing system recognizes the event and responds to the event, and the response includes an event notification message and after the computing device wakes up to handle an event, the computing device sends out an event notification message to the user.

On the other hand, the Applicant teaches, inter alia, switching off a transceiver of said wireless LAN device after transmission of said disassociate request; switching on said transceiver of said wireless LAN device; and transmitting, to a second access

point, a request inquiring whether at least one wake event for said host device occurred while said transceiver was switched off. These limitations, in conjunction with all limitations of the independent claims, have not been disclosed, taught, or made obvious over the prior arts of record.

The Applicant further teaches, *inter alia*, transmitting, in response to receiving a request for a wake event status, a wake event status indicating whether at least one wake event for said host device occurred; and updating a status of said wireless LAN device in an association table of said access point in response to determining that at least one wake event for said host device has occurred, wherein updating the status of said wireless device includes marking the status of said wireless LAN device as being in a wake event monitoring state, resetting a status flag for the wireless LAN device, and marking an entry for the wireless LAN device as no longer being associated with the access point so that the access point will not attempt to communicate with the wireless LAN device. These limitations, in conjunction with all limitations of the independent claims, have not been disclosed, taught, or made obvious over the prior arts of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
